Insert Event/Collection: Guideline

Upload landing page image and Insert image name into Image table.

Insert into Event/Collection table, store the insert id in a variable - **$event_id** or **$collection_id**

Insert into Event_collection_info table, store the insert id in a variable - **$info_id**

Insert into event_collection_bridge the $info_id and the **$event _id** or **$collection_id.**

Special columns

These columns contain strings with values separated by commas.

Overview header, Overview content

This was done so that they can be converted into an array (**using the PHP explode()**) and thenlooped through to display the data.

overview_header varchar(255)		Collection Name, By, Bags by, Held On
overview_content varchar(255)		Desert Rhaspody, Kikoromeo, Baobab Fishskin bags, 23 November 2018

COLLECTION NAME Desert Rhaspody

BY   Kikoromeo

BAGS BY   Baobab Fishskin bags

HELD ON   23 November 2018

Item_name

This will store the collection or event name. They are two because in some cases we display the shortened version of the event/collection name and in other cases we display the full name.

item_name	varchar(255)	⌄	FIMA 2018, Festival International de la Mode Africaine

It is converted to an array then to diplay the shortened name you use array[0], since it the first value and array[1] to display the full name since it the second value.
